PROJECT UNDERTAKEN

1. **PROJECT TITLE: Calculate Client Security Hash**

   PLATFORM: UiPath, Orchestrator

   DESCRIPTION: The process has been selected for RPA as part of the larger project initiative conducted within ACME Systems Inc and SHA1 Website, The Objective was to **Generate the Security Hash for each Client based on their personal information.**

   - We need to login to our ACME Account, navigate to Work Items Page and Extract Details **(ClientID, Name, Country)** of WI5 clients.
   - For each Extracted & Filtered Record, we must visit **SHA1** website to generate **Hash Code** of a specific client
   - Come Back to **Work Items Details Page** and Update the status to "**Completed**" and Paste above "**Hash Code**" in Comment text field.
   - Continue this Process for each record of **WI5** client

2. **PROJECT TITLE: Generate Yearly Report**

   PLATFORM: UiPath, Orchestrator

   DESCRIPTION: The process has been selected for RPA as part of the larger project initiative conducted within ACME Systems Inc, The Objective was to **Download all the monthly reports for a specific vendor and generate a yearly report.**

   - We have developed 2 sub-projects based on model "**Dispatcher - Performer**"
   - In **Dispatcher** -> We need to login to our ACME Account, navigate to Work Items Page and Extract details of **WI4 clients** and save them in **Orchestrator Queue** specified in **Config.xlsx File**.
   - In **Performer** -> Robot will fetch the **Queue Items** from **Orchestrator Queue** one by one and Process them by updating the record of all WI4 clients
   - Continue this Process for each **WI4** client record saved in **Orchestrator Queue**.

3. **PROJECT TITLE: Hotel Management System**

   TECH STACK: HTML5, CSS3, JavaScript, PHP, MySQL

   DESCRIPTION: Hotel Booking System is online booking engine that allows guests to make secure online reservations through hotel website and helps hotels to accept bookings and collect payments online.
